

The Last Bottle.

A Home For Vance Family.

In a forest where dwarfs live among giants, a discarded bottle becomes a shelter, a dream and a new beginning. The Vance family turns what was once waste into a home full of light, life and stories.

MEASUREMENTS

VANCE FAMILY : avg 30cm
BOTTLE HEIGHT : 7m
WIDTH : 3.2m

CAP TOWER

DISCARDED BOTTLE

EVOLUTION

SITE CONTEXT

Location: Ancient temperate rainforest.

Climate: Mild Summers, Cool winters

Elevation: Forest Floor (ap. 450m).

SITE SELECTION.

The bottle was carried away by rainwaters and came to rest between large tree roots.

- Natural shelter from strong winds.
- Near a freshwater stream.
- Easy access to resources.

Material

weathered plastic

reclaimed timber

pebbles.

SUN PATH & WIND ANALYSIS

- Morning sunlight enters gently through the bottle neck.
- Overhead canopy filters harsh sun and provides soft, diffused light all day.
- Prevailing winds are slowed by dense forest and large tree trunks.

SWOT ANALYSIS.

STRENGTH: strong passive sustainability → the design that integrate the passive solar orientation, natural ventilation & micro-climate controls.

design innovation → Unique formal concept.

WEAKNES: structural complexity → potential dead zones or complex navigation.

OPPORTUNITIES: rich biodiversity, strong narrative of sustainability & reuse.

THREAT: moisture and condensation control, limited space with curved forms.

RAIN & WATER FLOW

- Heavy seasonal rains are collected through the bottle cap and leaf canopies.
- Water is filtered by moss and roots.
