Underwater Pool

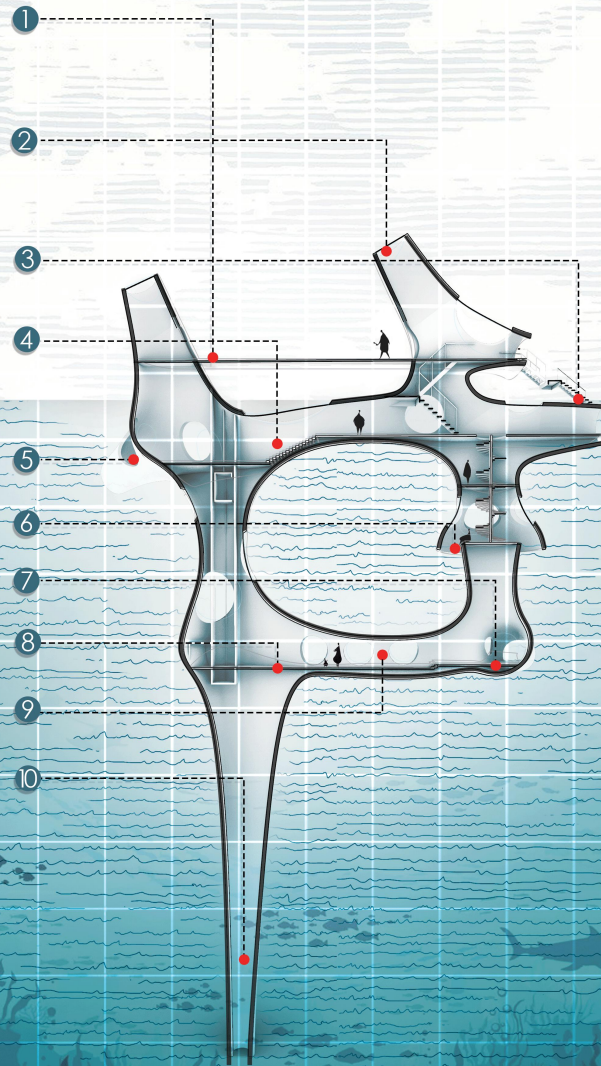

Concept Narrative

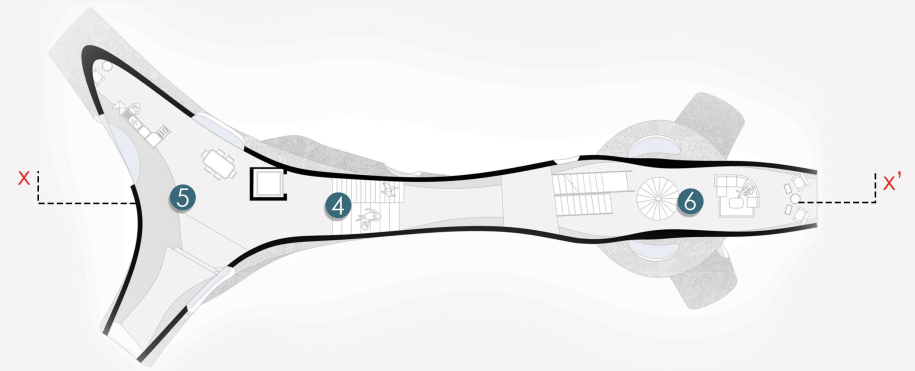

Living Reef imagines an underwater home for Mr. and Mrs. Vance and their two children, where everyday family life becomes inseparable from the surrounding marine ecosystem. Inspired by Mumbai's marine tetrapods, the dwelling is conceived as a protective shell that negotiates the forces of the ocean while creating intimate, light-filled spaces for living, learning, gathering, and solitude. Its Voronoi skin, textured like porous pumice rock, forms a biologically active surface that enables coral larvae to attach and regenerate naturally. As the house matures, it transforms into a living reef that shelters fish and other marine organisms, allowing the family to coexist with and contribute to the ecosystem they inhabit. Rather than merely occupying the ocean, the house becomes a regenerative habitat where architecture nurtures both human well-being and marine biodiversity.

Corallis

Section XX'

1 Garden Bridge

A landscaped bridge, creating an outdoor gathering space immersed in nature. It encourages movement, interaction, and moments of pause while maintaining a visual connection with the surrounding ocean.

2 Skylight

Draws natural daylight deep into the submerged house. It reduces dependence on artificial lighting.

3 Arrival Deck

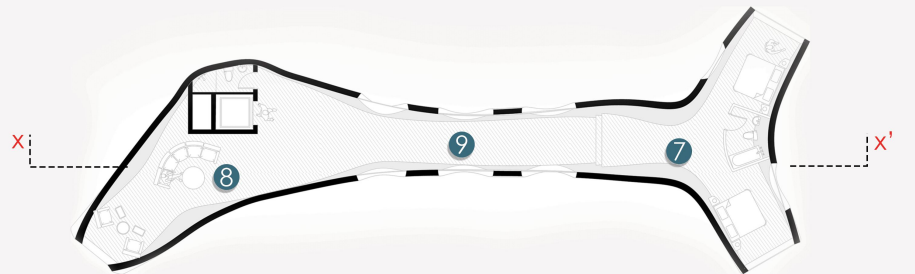

Acts as the primary threshold between the ocean and the home. It serves as the family's entry point while providing a calm transition from the open sea into the living environment.

4 Library

Positioned near the water surface for maximum daylight, with stepped seating integrating bookshelves and an overhead skylight.

5 Kitchen

Naturally lit through a skylight, which also supports a small kitchen garden for fresh herbs and vegetables.

6 Underwater Swimming Pool

A vacuum chamber keeps ocean water out, creating a protected indoor pool with the experience of swimming beneath the sea.

7 Bedroom

Two private bedrooms with panoramic underwater views through large glazed openings.

8 Bedroom

Two private bedrooms with panoramic underwater views through large glazed openings.

9 Panomaic View Corridor

serene ocean view on both side of walkway.

10 Supporting Element

base element for structural stability and coral regeneration.
