

THE LIVING RIFT

An Adaptive Residence for a Demogorgon Family in the Upside Down

The Origin of the Site

• Research Hypothesis

The site is interpreted as an extradimensional fracture created by a catastrophic energy rupture. The event permanently altered the geological, atmospheric, and biological conditions of the surrounding landscape, resulting in the formation of a new ecosystem known as the Upside Down.

• Environmental Transformation

FRACTURED BASALT

Columnar basalt fractured and weathered. Provides structural framework and surface cover.

ORGANIC MEMBRANE GROWTH

Biofilm-like membranes spread across surfaces, creating a living structural matrix.

ROOT INFILTRATION

Extensive root systems penetrate fractures and voids, connecting organic networks throughout the site.

HIGH MOISTURE POCKETS

Water-logged zones sustain fungal and organic development. Maintain high humidity and ideal growth conditions.

GEOTHERMAL FISSURES

Deep fissures emit geothermal heat and minerals, creating warm convection currents within the subsurface.

UNDERGROUND VOIDS

Natural cave networks and caverns formed by fracturing and dissolution. Provide spacious habitat chambers.

• SITE LOCATION

Earth

• Environmental analysis

Permanent low-light environment

High atmospheric humidity

Dense airborne spores

Living mycelial network

Organic membrane-covered terrain

Fractured basalt formations

Toxic atmosphere

Extensive underground cave systems

• Our client

A Fictional family: Mr. and Mrs. Vance and their two children.

The Demogorgon is a predatory humanoid creature that inhabits the Upside Down. They live in family units consisting of an adult male, an adult female, and their offspring.

ORIGIN Upside Down (Dimension X)	HEIGHT (JUVENILES) ~1.7 - 1.9 m
DIET Carnivorous	LIFESPAN Unknown
HEIGHT (ADULT MALE) ~3.0 m	BEHAVIOR Territorial, Protective, Predatory
HEIGHT (ADULT FEMALE) ~2.7 m	SENSES Enhanced smell

DESIGN CONCEPT

"Architecture as Habitat, Not Construction."

The Demogorgon residence is conceived as a living subterranean biome where architecture, geology, and biology function as a single integrated system. By embedding itself within fractured basalt, fungal networks, geothermal cavities, and existing cave systems, the shelter becomes an extension of the Upside Down itself. Instead of altering the landscape, it reinforces the natural processes already present, providing concealment, thermal stability, moisture, protection, and rapid access to hunting territories. The result is a habitat that enhances the survival, reproduction, and territorial behavior of Demogorgons while remaining inseparable from its environment.

• Re-defined Spaces

Entrance Territory — Territorial boundary with scent markers

Transition Chamber — Pressure and spore transition zone

Living Room — Hive Gathering Chamber

Dining Room — Feeding Hall

Kitchen — Flesh Processing Chamber

Parents Bedroom — Parent's Nest

Toilet — Waste Decomposition Pit

Children's Sleeping Area — Juvenile Nursery Nest

Study — Memory / Sensory Chamber

Drawing Room — Territory Display Chamber

Outdoor Garden — Spore Garden & Carnivorous Forest

• Inspiration

Spider webs network

MATERIAL PALETTE

BASALT

DARK VOLCANIC ROCK FORMING THE PRIMARY STRUCTURAL SHELL. PROVIDES THERMAL MASS AND PROTECTION.

MYCELIUM

LIVING STRUCTURAL REINFORCEMENT. ACTS AS INSULATION, REPAIRS CRACKS AND TRANSFERS NUTRIENTS THROUGH NETWORKS.

ORGANIC MEMBRANE

SEMI-TRANSPARENT BIOLOGICAL SKIN. FORMS WALLS AND CEILINGS, FILTERS MOISTURE AND DIFFUSES LIGHT.

ROOT NETWORK

PROVIDES STRUCTURAL REINFORCEMENT, GUIDES CIRCULATION, DRAINS WATER AND ACTS AS NATURAL HANDRAILS.

FUNGAL COLONIES

PROVIDE LIGHT, REGULATE HUMIDITY, EXCHANGE OXYGEN AND PRODUCE FOOD THROUGH FUNGAL CULTIVATION.

GEO THERMAL FISSURES

SUPPLY HEATING, STEAM, HUMIDITY AND PASSIVE VENTILATION THROUGH NATURAL FISSURES.

LAVA TUBES

NATURAL CIRCULATION CORRIDORS. PRIMARY STRUCTURAL PATHWAYS AND EMERGENCY ESCAPE ROUTES.

CONDENSATION CHANNELS

COLLECT ATMOSPHERIC MOISTURE AND DIRECT WATER INTO UNDERGROUND RESERVOIRS FOR SUSTAINABILITY.
